**AUTHORIZED SIGNATURE AND AGREEMENT**

The Vericom Certified Installer is responsible for providing proper documentation to receive the 25-Year Vericom Installation Warranty, including Warranty Submission Form, as-built drawings, and passing test results. Vericom reserves the right to provide an on-site review of any Certified Installation. The Vericom Certified Installer Program is valid until the end of the calendar year. Continued participation is based on the mutual agreement between Vericom and the Certified Installer to renew each calendar year.

Vericom Global Solutions, Inc. manufactures the highest quality structured cabling solutions and custom assemblies. All Vericom products are engineered and tested to meet or exceed all industry standards for electrical performance and mechanical durability. Many products are UL listed but all our products carry a Basic Warranty. The Basic Warranty guarantees all Vericom products to be free of any defects in material, workmanship, or fabrication.

Vericom provides certification for EIA/TIA compliance by utilizing internal testing and independent third-party testing. These products are specifically designated in the Vericom catalog to provide customer assurance. Products shown to meet the EIA/TIA-586 Standard are tested to meet:

1. Electrical criteria such as Attenuation and Crosstalk to verify proper performance to meet the Category specific requirement.
2. Mechanical specifications to ensure products meet or exceed industry standard durability requirements.
3. Installation specific requirements like pull strength, bend radius, and many other criteria to provide a well-engineered, easy to install solution.
4. UL requirements for plenum and non-plenum spaces to ensure Vericom’s products provide the proper safety standards.

This Basic Warranty assumes all EIA/TIA installation standards are properly followed and all products are maintained in the proper environment. Where applicable, the Vericom Catalog provides conditions as outlined in the EIA/TIA Standards to provide our Basic Warranty.

In addition, Vericom provides a 25-Year Installed Warranty which can be offered by Vericom Certified Installers at no additional cost to our shared customers. This warranty applies to installed components as well as the labor to repair or replace those components in the event of a system failure. Vericom cannot be held responsible for installations not conforming to the proper installation guidelines (EIA/TIA/BISCI/NEC) at the time of installation or failures caused by improper movement/relocation of horizontal links. Any repairs or replacement must be completed by Vericom personnel or Certified Installer.
