

Universal Modular Patch Panel, Shielded

Applications

Vericom Shielded Modular Patch Panels are generally mounted to 19" racks, wall mount brackets, and cabinets in the telecommunications room. The patch panel provides an interface between the horizontal cable and active electronics like switches in the telco room.

Description / Specifications

The shielded modular patch panels are a powder-coated, stamped metal panel with write-on labels. The panels include a grounding cable and bare metal panel to ensure shielded modules can be bonded to the rack or busbar. The panel accepts standard keystone modules including but not limited to Cat 5e, 6, 6A modules, HDMI, fiber optics, RCA modules, coax connectors, and more. Modular patch panels are available in a 24 port 1 RU (rack unit) configuration. The panel mounts to all standard 19" racks, cabinets, and wall mount brackets.

Ordering Information

Description

Universal Modular Patch Panel- Unloaded, Shielded

Item Number	No. of Ports	Rack Unit Quantity
MPPKS-04042	24	1RU

Features & Benefits

- Accepts all standard keystone modules
- Frame Material: SPCC
- Write-on labels provided to support labeling requirements
- Modules can be removed for future upgrades and MACs
- Integral grounding panel and wire ease bonding to rack or busbar
- Available in 24 ports (1RU) or 1.75" tall
- For use with shielded keystones

Standards Compliance

- Keystone Standard Ports
- EIA-310-D
